

University Course Scheduling Tool

Overview

The **University Timetable Assistant** is a web-based tool designed to simplify the process of course scheduling for students. Instead of manually browsing multiple pages on the university portal, this system provides a single, easy-to-use interface where students can view all available courses and sections, build their timetable, and print it instantly than do to add them.

Current Problem

At present, students must navigate several university systems to find their courses, register for sections, and frequently contact Student Affairs each new term to create a timetable. This process is time-consuming, prone to errors, and stressful during registration periods

My Solution

The University Timetable Assistant streamlines the entire process:

1. **Login** – Students log in securely with their university credentials.
2. **Course Display** – The system shows only the courses available for that student.
3. **Section Selection** – Students can easily select or remove sections with one click.
4. **Timetable View** – The timetable updates instantly to show chosen courses.
5. **Print & Submit** – Students can print a ready-to-submit timetable containing course codes, section numbers.

Technical Approach

- **Backend:** Built using Laravel framework.
- **Database:** connect directly to the university's API for real-time course data once access is granted.
- **Output:** Generates a printable timetable in standard university format.

Benefits for the University

- **Efficiency** – Reduces registration time and staff workload.
- **Accuracy** – Minimizes mistakes in course and section selection.
- **Student Satisfaction** – Makes the registration process smoother and more user-friendly.
- **Flexibility** – System is ready for API integration, ensuring future compatibility.

Conclusion

This project is a cost-effective, ready-to-use solution that addresses a common problem faced by

our students. With university support and API access, it can be fully integrated into the official portal to serve all students efficiently.
